BIONESS ANNOUNCES AVAILABILITY OF A CUTTING EDGE REHABILITATION PLATFORM TO IMPROVE ABILITIES IN PHYSICAL, OCCUPATIONAL, SPEECH AND SPORTS THERAPY PATIENTS

Touch screen system allows for integration of software programs meeting diverse rehabilitation needs, providing efficient and productive therapy and improved patient outcomes

VALENCIA, CALIF. – October 7, 2014 – Bioness, Inc. today announced the launch of the Bioness Integrated Therapy System (BITS™), a touch-screen based clinical rehabilitation platform designed to evaluate and improve abilities for individuals with disabilities resulting from traumatic injuries and neurological disorders and to improve performance in competitive athletes. BITS is a clinical nexus that allows current and future Bioness technologies to be integrated on a single platform. The system consists of a touchscreen display (up to 65”) mounted on a highly portable stand and is designed to support a series of software programs for optimizing patient outcomes.

The system is being launched with a Visuomotor software program covering seven main therapy categories including eye-hand, rotator, rapid eye movement, memory recall, metronome, letter chart and visual-motor programs. These therapy categories provide unique programs for visual-motor integration, improving reaction time, improving visual and auditory memory, visual-vestibular integration and improving hand speed and field attention.

“The introduction of the BITS system represents a significant development for Bioness. The system, in addition to being a clinical hub for future Bioness technologies, detects and charts patient improvement over time, centralizing the rehabilitation regimen,” said Todd Cushman, President and CEO of Bioness. “The high level of clinician and patient involvement and excitement when using the BITS is extremely motivating.”

Rehabilitation facilities interested in a demonstration of the BITS System can contact Bioness at 1.800.211.9136.

About the Bioness Integrated Therapy System (BITS)

The BITS is a touch-screen based therapy platform that will support a series of software programs designated to meet diverse therapy needs. The system is now available with an initial interactive software application designed to evaluate and improve abilities in individuals with disabilities resulting from traumatic injuries and movement disorders as well as improve performance in competitive athletes.

About Bioness Inc.

Bioness is the leading provider of innovative technologies to help people regain mobility and independence and improve quality of life. Neurological solutions for people suffering from hand and lower extremity paralysis include the L300® Foot Drop System, L300® Plus System, and the H200® Wireless Hand Rehabilitation System which utilize functional electrical stimulation (FES) to promote motor recovery and function for individuals affected by upper motor neuron injuries. Upper motor neuron may include central nervous system disorders including stroke, spinal cord injury, and traumatic brain injury. Patients may also benefit from the Vector Gait and Safety System®, providing over-ground gait rehabilitation through dynamic body weight support. Individual results vary. Consult with a qualified physician to determine if this product is right for you. Contraindications, Adverse Reactions and Precautions are available on-line at www.bioness.com

L300®, L300® Plus, H200®, Vector Gait & Safety System®, BITS™ and Bioness® are trademarks of Bioness Inc. | www.bioness.com | Rx Only
