

Dynavision D2™ is a visuomotor and cognitive assessment/training system, which may help patients to improve hand-eye coordination, reaction times and reaction speed.

A variety of visual and motor deficits can result from neurological injuries or diseases. An effective treatment approach to restoring both visual and motor function is to incorporate functional movement patterns with goal directed activities.

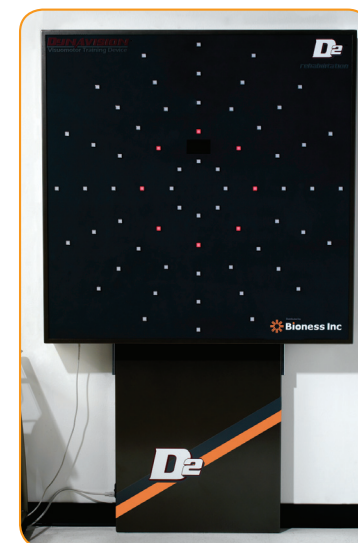

Greater Function, Greater Freedom – A Phone Call Away

The Dynavision D2 provides therapists with a unique approach to rehabilitation for visual and motor deficits which is both practical and fun.

Dynavision D2™

Dynavision D2 is a visuomotor system for patients with cognitive and motor deficits, visual impairments and attention disorders.

The Dynavision D2 Visuomotor Training System, distributed by Bioness Inc, assists therapists in treatment of visual field deficits and visual/attention deficits for certain patients with neurological disorders such as:

- Stroke
- Traumatic Brain Injury
- Other Neurological Disorders and Diseases

Some of the potential benefits your patients may achieve from the Dynavision D2 are:

- Increase in the speed, accuracy and efficiency with which they are able to take in visual information under a variety of cognitive demands.
- Improvement in the processing of visual information in static and dynamic environments to help compensate for the visual impairment caused by neurological injuries or diseases.

Use of the Dynavision D2 in combination with a comprehensive rehabilitation program may help improve visual function, response time, performance and motor training.

DYNAVISION D2 PRODUCT

Dynavision was originally developed as a visual system to improve the visuomotor skills of athletes competing in sports such as hockey, basketball,

football, and tennis. Over time, Dynavision programs have been adapted to provide the same training benefits to persons whose visual and motor function have been compromised by neurological injuries or diseases.

Dynavision provides therapists with a novel approach to rehabilitation, while allowing them to save and chart each patient's progress.

Benefits include:

- Visual motor assessment/training
- Visual cognitive assessment/training
- Improved hand-eye coordination
- Improved reaction times
- Increased efficiency to absorb visual information under a variety of cognitive demands

DYNAVISION D2 PRODUCT FEATURES

- Large board spanning 4 feet high and 4 feet wide
- Motorized 28" height adjustment capability
- Easy floor-supported installation system (earthquake code)
- Light weight, aluminum, durable construction
- Red and green LED lights built to withstand 1,000,000 impacts
- Fully computerized notebook with intuitive interface
- Compatible with any USB printer utilizing PCL-5 architecture to print patient outcomes*
- Easy-to-use computer software to activate 4 operating modes and up to 6 different light speeds

* See Bioness website for compatibility list
