BIONESS AND OPGA/POINT ANNOUNCE VENDOR AGREEMENT

Valencia, CA and Waterloo, IA — March 2, 2009 — Bioness Inc., a leading neuromodulation company, and OPGA/POINT Orthotics and Prosthetics, a nationwide network of over 1,300 independently owned and operated orthotic and prosthetic facilities, announced today a vendor agreement to offer Bioness' NESS L300™ Foot Drop System to OPGA/POINT members, effective March 2, 2009.

The agreement is intended to increase the availability of the NESS L300 among all OPGA O&P members and to improve the care for persons with foot drop, suffering from neurological disorders including stroke, multiple sclerosis, incomplete spinal cord injury, traumatic brain injury and cerebral palsy. OPGA members participating in the Bioness program will be trained to evaluate and fit patients, offer the device for home use and refer patients for follow-up therapy to a Bioness-trained rehabilitation facility.

“We are tremendously excited about the new relationship with OPGA/POINT. It will help expand the availability of the NESS L300 to an enormous number of additional prospective patients who suffer from foot drop, but are not currently undergoing rehabilitation,” said Yitzhak Zilberman, President and CEO of Bioness. “The NESS L300 has already helped thousands of patients and we believe working with OPGA/POINT will allow us to help many more patients regain mobility.”

“It is clear that OPGA/POINT and Bioness share a similar vision on the importance of quality training and successful patient outcomes. With an emerging emphasis on technology within the O&P profession, we believe the NESS L300 is the perfect addition to our leading portfolio of products and services,” said Dennis Clark, President of OPGA/POINT.

Foot drop is a partial leg paralysis that prevents the foot from lifting, causing instability and making walking difficult for persons suffering from conditions such as stroke, multiple sclerosis, incomplete spinal cord injury, traumatic brain injury and cerebral palsy. The NESS L300 treats foot drop by stimulating the muscles and nerves that lift the foot.

“The relationship with OPGA/POINT will allow Bioness to expand the availability of our NESS L300 foot drop system to over 1,300 independently owned and operated orthotic and prosthetic facilities. To ensure that we maximize patient outcomes, these facilities will be trained on how to evaluate and fit patients with foot drop and will work in tandem with our growing number of Bioness-trained rehabilitation centers,” said Todd Cushman, Senior Vice President of Global Business Development for Bioness.

To find a Bioness-trained facility, visit the Bioness website (www.bioness.com).

The NESS L300 is available through prescription only. Individual results vary. People should consult with a qualified physician to determine if the NESS L300 is right for them.

About OPGA

OPGA stands for the Orthotic & Prosthetic Group of America; a nationwide network of over 1,300 independently owned and operated orthotic and prosthetic facilities. These companies have joined together to better compete in the ever changing health care environment. By joining together, OPGA's goal is to help members receive manufacturer discounts similar to those received by multi-national companies. Such discounts provide OPGA's members the opportunity to remain independent. The savings its members enjoy by becoming an OPGA member depends on them and their type of business. The more members use OPGA's services and participating manufacturers, the more they save.

About POINT

POINT is committed to its mission, "to function as a vehicle for independent, American Board for Certification in Orthotics, Prosthetics & Pedorthics (ABC)-accredited orthotic and prosthetic facilities to compete with the large, national and regional firms in the managed health care environment." POINT is the only network whose membership is comprised entirely of companies with ABC-accredited facilities and ABC-certified practitioners, committed to the highest standard of orthotic and prosthetic care.

About Bioness Inc.

Bioness develops, manufactures and markets innovative neuromodulation products that aid individuals with central nervous system disorders such as stroke, multiple sclerosis, spinal cord injury and traumatic brain injury.

The NESS L300™ Foot Drop System and NESS H200® Hand Rehabilitation System, cleared for use by the Food and Drug Administration and CE-marked for the European Union, are designed to improve patient compliance with home therapy and clinical studies suggest users may experience significant improvements in functional abilities following treatment regimens with the devices as compared to other available technology.
